1. Introduction

Seven major Workshop Streams and their associated sub-sessions provided a major part of the substantive technical discussions at the World Parks Congress in Durban in September 2003. For three full days close to 2,800 participants attended seven major workshop streams and the many associated sub-sessions and short courses. The streams were:

- Workshop Stream I: Linkages in the Landscape & Seascape
- Workshop Stream II: Building Broader Support for Protected Areas
- Workshop Stream III: Governance of Protected Areas
- Workshop Stream IV: Developing the Capacity to Manage Protected Areas
- Workshop Stream V: Evaluating Management Effectiveness
- Workshop Stream VI: Building a Secure Financial Future
- Workshop Stream VII: Building Comprehensive Protected Area Systems

Issues related to three cross cutting themes - Marine Protected Areas, World Heritage and Communities and Equity - were integrated into each workshop stream.

General feedback on the effectiveness of the workshops streams was obtained through the overall Congress evaluation questionnaire and from interviews with participants. Detailed feedback on the profile of workshop participants and on their perceptions of how well the workshops addressed their objectives was obtained from evaluation questionnaires administered in each workshop stream as well as most of their associated short courses.

A summary of the evaluation results for each workshop stream appears in the overall Evaluation report. This report contains both the summary of overall workshop evaluation results (Section One) as well as the complete evaluation results for Workshop Stream I: Linkages in the Landscape & Seascape (Section Two).

This detailed report is provided mainly for use by the respective Workshop Stream Leaders and associated managers and organizers who may find the complete data analysis useful in reflecting on how well they met their objectives and what improvements they might wish to make for future Congress workshops.

Section One: Overall Workshop Results

Section Two: Specific Workshop Evaluation Results for Workshop Stream I: Linkages in the Landscape & Seascape
2. Overall Workshop Evaluation Results

This section reports on the overall effectiveness of the workshop streams. In all, there were seven workshop streams with multiple breakout sessions.

Workshop Stream I: Linkages in the Landscape & Seascape
Workshop Stream II: Building Broader Support for Protected Areas
Workshop Stream III: Governance of Protected Areas
Workshop Stream IV: Developing the Capacity to Manage Protected Areas
Workshop Stream V: Evaluating Management Effectiveness
Workshop Stream VI: Building a Secure Financial Future
Workshop Stream VII: Building Comprehensive Protected Area Systems

Two thirds of questionnaire respondents indicated that they had attended 50% or more of the workshop stream for which they completed a questionnaire. Overall attendance to the workshop streams above the 50% threshold varied between 63% (Workshop Stream VI Building a Secure Financial Future) and 82% (Workshop Stream IV Developing the Capacity to Manage Protected Areas) (see Exhibit 2.1). Consequently, the findings presented herein are deemed representative of the general perspectives expressed by the most active participants.

2.1 Overview of Workshop Streams

Finding 1: While workshop streams were strongly perceived as being well organized, respondents indicated that major improvements could have been made in terms of the venue location as well as in the coordination and focus of the breakout sessions.

Notwithstanding marginal differences between the workshops, all streams were strongly perceived as being well organized by attending participants (see Exhibit 2.2). Workshops V (Management Effectiveness) and VI (Building a Secure Financial Future) retained the highest rating (95% and 92% respectively) while Workshop I (Linkages in the Landscape and Seascape) obtained a rating of 82%, which suggests relatively minor differences between the workshops.

While close to three-quarters of all respondents indicated that the use of simultaneous breakout sessions to address major issues was effective (see Exhibit 2.3), comments noted in areas for improvement suggest that there is a need for better coordination and focus between the breakout sessions.

Organization of the Workshops
“Comprehensive coverage with absolutely first rate management and preparation.”
“Bonne infrastructure et bonne organisation d’ensemble.” (Good infrastructure and good organization on the whole.)
“Reflexionar sobre gestion.” (Thinking about management)
“Well organized and professionally prepared.”
“Wide coverage issues, good preparation and management.”
“Very well structured.”

---

1 The extent to which, individual workshop objectives were met and how well cross-cutting themes were addressed is explored in section six of this report.
sessions in order to reduce overlap and improve the achievement of results. The majority of respondents felt that a more focused Agenda with fewer breakout sessions and/or presentations would provide more time for in-depth discussion and debate as well as promote greater participation.

Moreover, survey respondents showed mixed responses regarding the availability of pre-workshop materials. In some cases (Streams III Governance, IV Developing Capacity & V Management Effectiveness), 68% to 71% of respondents felt there were adequate materials to prepare for the workshops, but in other cases (Workshops VI Secure Financial Future and VII Building Comprehensive PA Systems), as few as 31% to 40% of respondents reached the same conclusion.

Exhibit 2.2 Organization of the Workshop Streams

Exhibit 2.3 Simultaneous Breakout Sessions

The One Major Improvement I Would Make to the Workshop I Attended Is

“Fewer presentations – more interactive debate and discussions.”

“Do not step down to so many small subgroups. While all were interesting, there were too many small subgroups to be cost-effective and work effective for presenters.”

“Limit the number of parallel categories and put more time for open discussions on specific points.”

“Too many parallel sessions with similar topics.”

“Make sub-group presentations more consistent with one another.”

“Too many workshops, which overlap same issues.”

“Need better facilities to conduct sessions. These facilities were barely passable. It was difficult to hear and there were frequent disturbances from adjacent sessions.”

On average, more than half of respondents tended to agree that facilities were suitable for workshop activities. However, survey comments reveal that the most significant weakness of the workshop streams attended was the poor quality of the workshop rooms (too noisy, some too small, fixed chairs inappropriate, some too big) and lack of translation facilities. Similarly, improvement to the quality of the venue used to host the workshops was one of the three most important improvements suggested by participants.

The workshop streams were perceived by workshop participants as having clear objectives and thorough contents in terms of issues and topics to be covered. However, concerns were raised regarding the depth at which issues were explored and how well these issues were debated and discussed during the workshops.

Three-quarters to 90% of questionnaire respondents indicated that the workshop stream they attended provided clear objectives to guide their activities and moreover, the same proportion of respondents felt that the contents were likewise thorough and complete (see Exhibit 2.4 and Exhibit 2.5).

Similarly, more than three-quarters of survey respondents indicated that the workshop materials made available in each individual stream were useful to participants.
More than three-quarters of workshop questionnaire respondents indicated that key issues and lessons learned were well articulated in their respective workshop stream (see Exhibit 2.6). Similarly, over 80% observed that the workshop stream(s) they attended adequately identified key challenges and issues (see Exhibit 2.7), 30% indicated that the level of debate was adequate (see Exhibit 2.8), and another 40% tended to agree. Concern was raised by others that issues and lessons were not sufficiently addressed (see Exhibit 2.9).

Among the most significant strengths of the workshop streams, respondents noted that they were successful in exploring new ideas, themes and issues while strengthening technical knowledge. Workshops were also attributed with having made contributions towards the advancement of knowledge and science of Protected Areas and for having raised the profile of Protected Areas issues.

While respondents were generally positive about the thoroughness of the workshop contents, the fourth most often stated weakness and/or area for improvement noted by respondents suggests that relevant issues were addressed superficially or too broadly. Comments collected from all the workshop questionnaires indicate that there was a lack of depth to the presentations and/or that important gaps were not addressed. Respondents indicated that improvements should be considered regarding the quality of the presentations and materials provided to ensure delivery of more substantive in-depth analysis and substantive content.

Further it was recommended that workshops should limit their focus to the most important themes and issues, with fewer presentations, more debate and discussion, improved facilitation and chairing, and fewer workshops/breakout sessions.
The most significant weakness noted by questionnaire respondents as well the single most important improvement they would make related to the lack of discussion and debate in the workshops. The majority of comments noted that the sessions were either inappropriately facilitated to foster the exchange of ideas or that time was poorly managed.

**Lack of Debate and Discussion**

“Participants should be allowed to comment and ask questions at the end of each presentation.”

“No adequate time to discuss presentations.”

“Workshops often did not allow time for rebuttal or discussion. We were often asked only for one key comment or recommendation rather than being able to discuss case studies and issues among the group.”

“Ampliar las discusiones, porque de lo contrario quedar cases obturas.”(Widen the discussions, with contrasting case studies)

“Too many presentations and too little time for discussions.”

“Time constraints for in-depth study and understanding of so many important and relevant issues.”

“Need to hear more experience from the audience to analyze issues and implications more carefully.”
Finding 2: Overall workshop streams were effectively chaired and relevant resource persons were able to constructively contribute to the debates, however some improvements were suggested.

Over three-quarters of questionnaire respondents agreed or tended to agree that workshops were either effectively chaired (see Exhibit 2.10) or that resource persons associated with each workshops (subgroup chairs, co-chairs and presenters) were able to constructively contribute to the workshop debates (see Exhibit 2.11). While the quality of presenters (competence, expertise and experience) was recognized as being one of the most significant strengths of the workshop streams, a concern was noted by participants that improvements could be made. Some respondents commented that chairs and facilitators lacked appropriate skills or abilities to manage sessions, facilitate discussions and use time efficiently.

Exhibit 2.10 Effectively Chaired Workshops

Exhibit 2.11 Resource Person Contributions

Finding 3: The workshop streams were perceived as being directly relevant to the work of respondents: the workshops were successful in enhancing the knowledge of respondents on key issues as well as in providing skills that would be useful to their organizations.

On average, over 90% of survey respondents indicated that the workshop they attended had enhanced their knowledge and understanding of the topics discussed (see Exhibit 2.12), that the stream issues were directly relevant to their work (see Exhibit 2.13) and that the knowledge and skills gained would be useful to their respective organizations (see Exhibit 2.14).

2 Average based on responses from the seven workshop streams. The lowest value noted was 86% and the highest was 96%.
As noted earlier, the effectiveness of the workshops in providing new insights on relevant topics was the second most significant strength noted by respondents. Survey responses further indicate that workshops were successful in advancing the level of knowledge on the topics discussed as well as on raising the profile of issues and in setting directions. Similarly, respondents also indicated that the workshops had provided participants with relevant and practical application. Sample statements relating to these observations are noted in the textbox below.

Usefulness of Workshop Stream

“New approaches to link landscape/seascape.”

“Quality of technical details and substance.”

“Conocer muchas experiencias de paisajes y como solucionar sus problemas.” (Learned of many countries’ experiences and how they have solved their problems)

“Practical solutions presented.”

“Presentation of best practices and experiences from countries all over the world.”

“Various topics such as: ‘case studies,’ ‘lessons learned,’ ‘finance tools,’ ‘management effectiveness,’ ‘ecological integrity,’ etc.”

Finding 4: The workshop streams were highly effective in providing networking opportunities to participants.

More than 89% of all questionnaire respondents indicated that the workshop they attended provided a good opportunity to network with others (see Exhibit 2.15). The richness and diversity of participants and the resulting wealth of knowledge and experience that was brought
to bear in the workshop sessions, proved to be the most significant strength of the workshop streams according to the respondents.

The Most Significant Strength of the Workshops

“High number of experiences from all over the world presented.”

“Networking and understanding what other areas are doing.”

“Allowed me to establish contact with a strong approach useful to my organization.”

“The number of experts and parishioners who were pulled together to share experiences and forge new directions.”

“Bringing the global community to share experiences.”

“La forte mobilisation de tous les acteurs concernés par la conservation de la nature et de la biodiversité.” (All the actors concerned with the conservation of nature and biodiversity were strongly motivated)

“The opportunity to hear other experiences and listen to how people in other countries and Protected Areas are dealing with issues we work on.”

Workshop stream contributions towards the advancement of the Protected Areas Agenda as well as the Outputs of the World Parks Congress were perceived as being potentially significant.

While the extent to which workshop streams were able to make contributions to the WPC Outputs and the advancement of the Protected Areas Agenda was perceived as being potentially significant by more than two thirds of survey respondents, some wide variances were noted between the different workshops. When asked whether or not the workshop stream represents a potentially significant contribution to the Durban Accord and Action Plan, a strong majority of respondents agreed with the statement and some notably so, such as in Workshop Stream VII Building Comprehensive Protected Areas (see Exhibit 2.16). Similar results were obtained for the contributions of the workshop streams towards the Convention on Biological Diversity (see Exhibit 2.17) and the advancement of the Protected Areas Agenda (see Exhibit 2.18).
Exhibit 2.16  Contributions to the Durban Accord and Action Plan

Extent to which questionnaire respondents agree that the outputs of the workshop streams represent a potentially significant contribution to the Durban Accord and Action Plan

- Workshop I (n=61)
- Workshop II (n=131)
- Workshop III (n=72)
- Workshop IV (n=63)
- Workshop V (n=91)
- Workshop VI (n=72)
- Workshop VII (n=45)

Exhibit 2.17  Contributions to the Convention on Biological Diversity

Extent to which questionnaire respondents agree that the outputs of the workshop streams represent a potentially significant contribution to the Convention on Biological Diversity

- Workshop I (n=61)
- Workshop II (n=128)
- Workshop III (n=72)
- Workshop IV (n=62)
- Workshop V (n=91)
- Workshop VI (n=69)
- Workshop VII (n=44)
Correspondingly, the contributions made by workshop streams towards the advancement of the Protected Areas Agenda and the Outputs that resulted from the Congress were also noted by participants as one of the most significant strengths of the WPC. Respondents indicated that the workshops were successful in making contributions towards the advancement of Protected Areas knowledge and science and consequently, towards the relevant conventions and WPC Outputs.

**Exhibit 2.18 Contributions to the Advancement of the Protected Areas Agenda**

Extant to which questionnaire respondents agree that the recommendations from the workshop streams, if adopted and implemented, represent a significant advancement of the Protected Areas agenda.

**Finding 5:** Workshop streams were successful in meeting the expectations of participants and in providing significant added value to the World Parks Congress.

While some variances were noted between the workshop streams regarding the extent to which participants expectations were met, more than three-quarters of survey respondents were found to be in agreement with the latter statement (see Exhibit 2.19). Similarly, survey results show that 83% to 100% of workshop stream questionnaire respondents agreed that the stream they attended would provide significant added value to the World Parks Congress (see Exhibit 2.20).
3. Specific Workshop Evaluation Results for Workshop Stream I

The following sections present findings related to the specific objectives of each workshop stream and the extent to which cross-cutting themes were successfully addressed. The cross-cutting themes explored in this Congress were Marine Protected Areas, World Heritage, and Communities and Equity.

3.1 Workshop I Objectives

Finding 6: The objectives of Workshop Stream I, Linkages in the Landscape & Seascape, were perceived as having been mostly addressed. However, questionnaire responses suggest that concrete and straightforward objectives were perceived to be better addressed than those dealing with planning and management issues.

Participant responses to the workshop questionnaire suggest that for the most part, the Linkages in the Landscape and Seascape workshop was successful in addressing its stated objectives. The key aspects of linkages in land/seascape were perceived as being mostly addressed by 50% of respondents and another 24% thought that these were completely addressed (see Exhibit 3.1). Similarly, the identification of relevant stakeholders (see Exhibit 3.4) was likewise identified by more than two-thirds of respondents as having been mostly addressed. As for the practical aspects of planning and managing linkages (see Exhibit 3.2) and the role of linkages in strategic planning and adaptive management (see Exhibit 3.3), these were assessed as having been addressed by nearly two-thirds of respondents.

When participants were asked to assess the extent to which the workshop stream was successful in defining the importance of managing Protected Areas in the context of their surrounding land/seascape, over a third felt that this had been somewhat addressed and close to 10% indicated that they did not know (see Exhibit 3.5). While the overall assessment of this last point remains positive, it nevertheless suggests that the rationale for managing Protected Areas in the context of its linkages to surrounding areas was not as well understood as it could have been. Moreover, the fact that objectives presenting planning and management components were noted as having been slightly less well addressed, supports observations made by WPC questionnaire respondents that not enough time was given to adequately address complex issues.

![Exhibit 3.1 Defining Key Aspects of Linkages](chart1)

![Exhibit 3.2 Identifying Practical Aspects of Linkages](chart2)
Exhibit 3.3  Role of Linkages in Strategic Planning and Adaptive Management

Exhibit 3.4  Identifying Stakeholders Involved in Linkages

Exhibit 3.5  The Importance of Managing Protected Areas in the Context of Linkages

3.2  Workshop I Practical Applications

Finding 7:  The extent to which practical applications were adequately developed during simultaneous sessions varied considerably.

According to workshop questionnaire respondents, some of the practical applications related to the Linkages in the Landscape and Seascapes stream were better developed than others. Questionnaire results suggest that 56% of respondents thought that the workshop had been mostly successful in developing an understanding of cultural linkages to improve the links between Protected Areas and the land/seascape (see Exhibit 3.8). Similarly, close to half of respondents indicated that the workshop had mostly demonstrated how to protect land/seascapes (see Exhibit 3.7). With respect to economic linkages and planning ecological linkages however, questionnaire results suggest greater ambivalence. When asked to rate the extent to which practical applications had been developed on how to deal with economic linkages related to landscape management, fewer than 37% believed that this had been mostly or thoroughly developed (see Exhibit 3.9). Similarly, only 39% reported that the workshop had mostly or thoroughly developed practical applications relating to how to plan ecological linkages in land/seascape (see Exhibit 3.6).
### Exhibit 3.6 Planning Ecological Linkages in the Landscape & Seascape

Extent to which practical applications on how to plan ecological linkages in the land/seascape have been developed (n=60)

- Thoroughly developed: 27%
- Mostly developed: 37%
- Somewhat developed: 10%
- Not developed: 15%
- Does not apply: 13%

### Exhibit 3.7 Protecting Landscapes & Seascapes

Extent to which practical applications on how to protect land/seascapes have been developed (n=60)

- Thoroughly developed: 10%
- Mostly developed: 25%
- Somewhat developed: 32%
- Not developed: 15%
- Does not apply: 10%

### Exhibit 3.8 Understanding Cultural Linkages

Extent to which practical applications on understanding cultural linkages to improve the links between Protected Areas and the land/seascape have been developed (n=61)

- Thoroughly developed: 7%
- Mostly developed: 28%
- Somewhat developed: 33%
- Not developed: 10%
- Does not apply: 23%

### Exhibit 3.9 Dealing with Economic Linkages

Extent to which practical applications on how to deal with economic linkages related to landscape management have been developed (n=59)

- Thoroughly developed: 46%
- Mostly developed: 31%
- Somewhat developed: 25%
- Not developed: 8%
- Does not apply: 10%

### 3.3 Workshop I Cross-Cutting Themes

**Finding 8:** While the marine cross-cutting theme was mostly perceived as not being pertinent to the Linkages workshop, the majority of those who responded believed that the marine theme was only partially addressed.

The majority of the workshop questionnaire respondents indicated that the marine cross-cutting theme did not apply to the sessions they attended. With respect to management techniques relating to seascapes and corridor planning, more than 35% indicated that this subject was either not addressed or somewhat addressed during the workshop, compared to a little over 20% who believed that this was either mostly or completely addressed (44% answered that the statement did not apply to the session(s) they attended) (see Exhibit 3.10). A little more than 24% of respondents believed that guidelines to establish marine no-take reserve networks had either not been addressed or only partially so (58% indicated that this did not apply to the session(s) they attended) (see Exhibit 3.11). Similarly, close to 23% of respondents indicated that current management issues related to the concept of large marine ecosystems had only somewhat been addressed (58.5% responded with “Does not apply”) (see Exhibit 3.12).
Exhibit 3.10  Marine Management Techniques

Extent to which the Marine cross-cutting theme was addressed with respect to management techniques including best practices of seascapes and corridor planning (n=54)

Exhibit 3.11  Guidelines to Establish Marine No-Take Reserves

Extent to which the Marine cross-cutting theme was addressed with respect to guidelines to establish marine no-take reserve networks that improve fisheries management and protect and maintain ecosystem function (n=53)

Exhibit 3.12  Large Marine Ecosystems

Extent to which the Marine cross-cutting theme was addressed with respect to current management issues related to the concept of Large Marine Ecosystems (n=53)

Finding 9: Only a third of workshop participants perceived the cross-cutting theme related to World Heritage as having been addressed.

The use of World Heritage Sites as a means to link nature and culture was perceived as having been addressed by over 36% of questionnaire respondents. A little less than a third thought the workshop had either not addressed or only partially addressed this issue and over 30% thought that this either did not apply or was not pertinent to the sessions they attended (see Exhibit 3.13).

Exhibit 3.13  World Heritage Theme

Extent to which the World Heritage cross-cutting theme was addressed with respect to the use of World Heritage Sites as a means to link nature and culture (n=52)
Finding 10: While the role of communities in protecting land/seascapes was perceived as being well addressed, issues relevant to human-wildlife conflict and mobile peoples were not seen as having been as thorough.

Close to 60% of workshop questionnaire respondents indicated that the roles of communities in protected land/seascapes were mostly to completely addressed (see Exhibit 3.14). Comparatively, a third of respondents felt the same way about the extent to which issues relevant to human-wildlife conflicts were addressed (close to 42% responded by “Does not apply”) (see Exhibit 3.15). Similarly, a little over 30% of respondents indicated that issues relevant to mobile peoples had been mostly to completely addressed during the workshop (see Exhibit 3.16).
3.4 **Profile of Workshop Stream I Participants**

The following section presents information relative to the description of the workshop participants. Exhibit 3.17 and 3.18 provides the sex ratio and affiliation of workshop participants; Exhibits 3.19 and Exhibits 3.20 describe the respective professional qualifications of the participants and the region in which they work; Exhibit 3.21 details the approximate level of attendance and Exhibit 3.22 provides an overview of what participants attended.

**Exhibit 3.17  Sex Ratio of Workshop Participants**

**Exhibit 3.18  Affiliation of Workshop Participants**

**Exhibit 3.19  Protected Area versus Non-Protected Area Professionals**

**Exhibit 3.20  WCPA Regional Representation of Workshop Participants**

**Exhibit 3.21  Level of Attendance**

**Exhibit 3.22  Sessions / Working Groups Attended**
