Health and Nature Journey

Recognizing the contributions of nature to health, well-being and quality of life.

‘As a medical doctor and public health scientist, it is my professional opinion that conservation biologists can actually save more lives and prevent more illness than the health sector’

Johnathan Patz, MD MPH, Global Health Institute, IUCN World Parks Congress 2014.

The outcomes from the Improving Health and Wellbeing Stream 3 at the 2014 Congress demonstrated the fundamental links between healthy ecosystems and human health and wellbeing.

Consistent with Sustainable Development Goals, nature should be appropriately conserved for its considerable benefits to human health and more broadly for its benefits to environmental sustainability, economic, social and cultural wellbeing.

This health and nature journey will take participants through a diverse range of sessions demonstrating the importance of protecting nature for human health and economic, social and cultural wellbeing.

Sessions will explore opportunities and practical solutions to build a culture of health that prioritizes nature-based solutions and solutions to build stronger support for cross-sector partnerships to integrate health and wellbeing with nature conservation, policy and practice.
Health and Nature

More people are living increasingly urbanized lifestyles and spending less time outdoors and in nature. At the same time there are major concerns about the increasing prevalence of human health issues such as heart disease, diabetes and depression due to physical inactivity, stress and poor nutrition.

Across the world there is greater recognition that nature and green space sustains our life, livelihoods and livability. Since the original Healthy Parks Healthy People concept was developed in 2000, and following from the first International Healthy Parks Healthy People Congress in 2010, this initiative has grown around the world to increase community awareness that the conservation of nature, culture and open space through parks and protected areas provides wide ranging benefits for people’s health and wellbeing.

The Health and Nature journey will build on the health and wellbeing agenda and the ‘Promise of Sydney’ from the IUCN World Parks Congress 2014, a bold vision which encapsulates the key recommendations and solutions developed as a result of the Congress http://worldparkscongress.org/about/promise_of_sydney.html. This promise was supported by the commitments of over 50 countries and organizations to accelerate implementation of conservation goals through protected areas.

As a result of the collective outcomes of the Health and Nature journey at the IUCN World Conservation Congress 2016, widespread support for greater integration of health and nature within the IUCN 2017-2020 Programme at the Members’ Assembly will be developed. Further evidence and support to enact Motion #069 ‘Strengthening cross-sector partnerships to recognize the contributions of nature to health, well-being and quality of life’ (https://portals.iucn.org/congress/motion/069) will also be generated.

Key to unlocking the values of parks and protected areas for health and wellbeing while conserving biodiversity, is the formation of long-term partnerships between the health and conservation sectors.

We welcome all delegates to actively participate in the sessions within this journey, to contribute to the vibrant discussion about the connections between health and nature and form those vital partnerships.
