INTEGRATED PLANNING FOR
**CLIMATE CHANGE
BIODIVERSITY**
FOR IMPROVED PARTICIPATORY GOVERNANCE
Online Course

Supported by:

Federal Ministry for the
Environment, Nature Conservation,
Building and Nuclear Safety

based on a decision of the German Bundestag

OVERALL GOAL

Land-use planning frameworks have traditionally focused on developing settlements and related infrastructures with limited consideration of biodiversity conservation and mitigation requirements. The aim of this course is to increase the capacity of key stakeholders to optimize planning to support biodiversity and climate change adaptation objectives, including through the effective engagement of protected area systems.

COURSE STRUCTURE

The course is structured in 4 modules:

- Connecting land-use, climate change and biodiversity
- Inter-sectoral and inter-institutional collaboration
- Public Participation in decision Making
- Regional planning for harmonization and connectivity.

Upon completion of the course you will be able to identify the interaction of climate change and biodiversity with land-use plans, identify their position in the planning and decision-making process, identify the ways to collaborate across national borders and much more.

CERTIFICATE

Once you successfully meet the passing criteria of the course you will receive a Certificate of Completion jointly delivered by UNITAR and IUCN.

Badges

You will earn a badge upon the completion of each module.

This badge system allows you to share your learning progress on social media.
