

# The IUCN Red List of Threatened Species™ 2009 update

## Mammal Facts

Total species assessed in = 5,490 (up by 2 since last year)

Total EX or EW = 78 (1%) [EX = 76; EW = 2]

Total threatened = 1,142 (21%) [CR = 188; EN = 449; VU = 505]

Total NT = 322 (6%).

Total DD = 837 (15%)

Total LC = 3,111 (57%)

### **Eastern Voalavo (*Voalavo antsahabensis*) - EN**

This rodent enters the Red List for the first time this year. Described in 2005, the species is endemic to Madagascar. It seems likely to be confined to montane tropical forest in the region around Anjozorobe, with a narrow altitudinal limit and a narrow range. Ongoing slash-and-burn activities are resulting in habitat decline.
